CATALOGUE INDEX

015 Multilayer Plumbing System

- 016 Multilayer Pipes
- 018 Pre-insulated Pipes
- 019 Corrugated Pipes
- 021 Press Fittings
- 036 Multi-jaw Press Fitting
- 047 Push Fittings
- 053 Compression Fittings
- 057 Manifolds
- 059 Brass Threaded Adapter

074 PP-R Plumbing System

- 075 PP-R Pipes
- 082 PP-R Fittings

092 Gas Piping System

- 093 Multilayer Pipes
- 095 Press Fittings
- 104 Compression Fittings

061 PEX Plumbing System

- 062 PEX-b Pipes
- 064 Lead Free Crimp Fittings
- 069 Press Fittings

107 Underfloor Heating System

- 108 Oxygen Barrier PEX Pipes
- 109 Multilayer Pipes
- 110 Underfloor Heating Manifolds

113 Air Conditioning Piping System

- 114 Flexible Hoses For Water Supply

116 PVC Drainage System

- 116 PVC Drainage Pipes
- 118 Solid Fittings
- 132 Low-noise Fittings

140 PVC Rigid Conduit System

- 143 Conduit Pipes
- 144 Fittings

151 Valves

- 152 Plumbing Valves
- 157 PP-R Valves
- 160 Gas Valves
- 162 Heating Valves

163 Flexible Hoses

- 163 Flexible Hoses For Water Supply

165 Tools & Accessories

- 165 For Multilayer Piping Installation
- 169 For PEX Piping Installation
- 170 For PP-R Piping Installation
- 173 For PVC Piping Installation
- 175 For Underfloor Heating Installation

176 Installation Instructions

- 176 F5 Installation Instructions
- 177 F9 Installation Instructions
- 179 F6 Push-fit
- 180 F1C Installation Instructions
- 181 PEX+Lead Free Crimp Fittings (Copper crimp ring)
- 182 PEX+Lead Free Crimp Fittings (Stainless steel crimp)
- 183 PF15 PEX Press Fitting
- 184 PP-R Pipe Installation Instructions
- 185 Glue Connection
- 186 Rubber-Ring Connection
- 187 Installation of Fitting
- 188 Installation of Gang Box

ABOUT RIFENG

China Plastic Pipe Industry Pioneer

Established in 1996, RIFENG Enterprise Group Co. Ltd has been committed to developing high-quality and environmental-friendly piping products that cover plumbing, indoor climate, drainage, and gas applications etc. RIFENG first introduced the most advanced piping technologies and facilities from Europe in the 1990s, since then it has been pioneering China's plastic piping industry and has changed customers' mindsets of using galvanized pipes for plumbing.

RIFENG is passionate to provide customers with more hygienic and safe piping products all the time.

Global Supplier of Piping Systems

With over 5,000 employees and 9 manufacturing bases, RIFENG is increasingly taking an active role in the worldwide plastic piping market. The company has upgraded its product range from multilayer pipes to PEX, PP-R, PVC and brass hardware while also striving to provide professional systematic solutions.

As globalization speeds up, RIFENG has aspired to lay out a large worldwide sales network.

MILESTONE

1996

Established in Foshan

2002

Brass Hardware Facilities Launched

2008

Top 1 Multilayer Pipe Supplier Worldwide
KWD - globalpipe 2008

PP-R Product Became Available

2010

Manifolds Facilities Launched

Founded RIFENG brand for sanitary ware products

2012

Introduced unique PVC Conduit Marking Method as Industry Standard

Upgraded Production Facilities, such as CNC Machine Center.

2013

PVC Drainage Production Line Launched

New Production Bases Founded (Foshan)

2014

New Production Bases Founded (Weinan, Huangshi)

Annual Pipe Capacity Over a Billion Meters

2015

Developed to be an Enterprise Group

The Fifth Production Bases Founded (Wuhan)

2018

Subsidiaries established in the US and Indonesia

MULTILAYER PLUMBING SYSTEM

- Multilayer Pipes
- Pre-insulated Pipes
- Corrugated Pipes
- Press Fittings
- Push Fittings
- Compression Fittings
- Manifolds
- Brass Threaded Adapter

Multilayer Pipes

External and internal layers

They are made of (cross-linked) polyethylene that is extensively used in distribution of potable water. The silane cross-linking provides superior chemical and mechanical properties.

Intermediate layer

An aluminum alloy with overlapped welding that guarantees a total barrier to the passage of oxygen and light and provides excellent mechanical and chemical properties.

Bonding layers

They are made of a powerful adhesive that bonds the intermediate aluminum layer with the internal and external layers.

Advantages of RIFENG multilayer pipes

- Corrosion-resistant
- Barrier to the permeation of oxygen and light
- Service life up to 50 years
- Light in weight and flexible
- Smooth inner wall ensures low pressure loss
- Ideal for plumbing solutions

Standards

- DVGW W534
- DVGW W542
- W270
- XP P41-250

Pre-insulated Pipes

RIFENG pre-insulated pipes offer an innovative and energy-efficient selection for underfloor heating, cooling and water distribution solutions with secure and durable systems. The system can greatly reduce heat loss and feature high flexibility and easy installation which provides the most effective insulation for pipelines at the lowest initial cost whether for buildings or complete local distribution networks.

- The most economical option for domestic and commercial hot/cold water transportation.
- Products are formed by 30-40 times high foaming, light weight, good flexibility and cushioning performance.
- Low thermal conductivity, excellent thermal insulation performance, environmental protection and energy saving.
- Strong corrosion resistance and excellent weather resistance.
- Independent bubble foam provides excellent soundproofing and vibration resistance.

Corrugated pipes

RIFENG corrugated pipe, made of HDPE compositions, is designed to protect plastic pipes from external physical damage and prevent the intrusion of condensate forming on the pipes in the surrounding areas. RIFENG corrugated pipe, as a foldable elastic tube, is an ideal companion for pressure pipes.

Good flexibility and rigidity

The corrugated pipe has good flexibility along the axial direction and good rigidity along the radial direction, which can adequately protect the internal pipeline in different stress conditions.

Easy to maintain

Installation of RIFENG corrugated pipe is convenient as the friction coefficient is lower and is convenient for future maintenance.

Protection of working pipes

With the advantage of strong sealing, RIFENG corrugated pipe can not only prevent leakage but also protect the pipe from light aging and corrosive substances.

Multi-jaw Press Fitting - F18

- Can be pressed with U/H/TH/RFZ profiles. Three O rings on the fittings, which makes for a better sealing performance.
- With a leakage indicator, if the fittings are not properly pressed, water will come out during the pressure test.

PUSH-FIT - F6

ASSURANCE

Inspection holes provide visual verification the tubing has been fully inserted when the green indicator is shown.

SECURITY

No soldering or glue significantly reduces the chance of installation error and leaks. Additionally, the double seal ring structure provides a better sealing performance.

DESIGN

Engineered multi-barbed teeth provide a reliable and secure connection.

HYGIENE

No torch, glue, or solvent is required for installation, avoiding the contamination of toxic chemicals in potable water, ensuring a healthy living environment.

QUALITY

High-quality materials with exceptional corrosion and temperature resistance, ensure better performance and extend service life.

EASE OF INSTALLATION

Plumb an entire home without using special tools. Instant push-fit connection for increased ease-of-use. No training required, reduce labor costs.

Standards

- AS 4176.3
- AS/NZS 2537.2
- AS 4020

Compression Fittings - F1

- Removable and reusable
- Quick and simple installation with a spanner
- Excellent sealing performance with EPDM double O-ring
- Cost-effective
- Pressure and corrosion resistant
- Suitable for drinking water supply

PEX PLUMBING SYSTEM

PEX-b Pipes

Lead Free Crimp Fittings

Press Fittings

PEX-b Pipes

RIFENG pex-b pipes

RIFENG PEX-b pipe is made of cross-linked polyethylene. RIFENG utilizes the production method of silane cross-linking that provides PEX-b pipe with superior chemical and mechanical performance. RIFENG PEX-b pipe is available in red, white and blue, and is ideal for potable water supply.

Standards and approvals

RIFENG PEX-b pipe meets the standard of CSA B137.5, ASTM E84, ASTM 876 and ASTM 877. It is listed to NSF/ANSI 61 by NSF for use in potable water systems.

Pressure and Temperature

73.4°F at 160 psi
180°F at 100psi

Standards

- AS2492
- NBR 15939-1
- NSF 14
- NSF 61
- ASTM F876/F877
- AWWA C904
- CSA B137.5

Certificates

Advantages of RIFENG PEX plumbing system

- Chlorine-resistant
RIFENG PEX pipe meets the highest level of chlorine resistance.
- Hygienic and healthy
RIFENG PEX plumbing system is certified to NSF/ANSI 61 and NSF/ANSI 372 for safe supply of potable water and is lead free.
- Corrosion-resistant
RIFENG PEX is durable and resistant to corrosion.
- Ease of installation
The PEX-b pipe is flexible and available in long coils with less need for fittings compared to rigid pipes. With RIFENG crimp fittings, installation is much easier.

Lead Free Crimp Fittings

RIFENG lead free crimp fittings

RIFENG PF5 crimp fittings are used for making connections with PE-X pipes. PE-X pipes contain less than 0.25% of lead and are in compliance with the US Drinking Water Act and the 2011 US Reduction of Lead in Drinking Water.

Standards and approvals

RIFENG PF5 crimp fittings are manufactured to comply with ASTM F1807 and F877.

Standards

- ASTM F1807
- CSA B137.5
- ASTM F877

PEX Press Fitting - PF15

PF15 PEX Press Fitting is mainly available for potable water systems and used for making connections between PEX pipes.

- Unlike with crimp fittings, you don't need to buy copper rings and stainless steel clamps separately, avoiding the risk of missing press rings.
- The fittings are expertly manufactured in the factory, helping to reduce installation errors on the job.
- The pressing area of the press rings is larger than that of the copper rings or stainless steel clamps, which makes the pressing tighter and safer.
- The port holes line up to show the position of the inserted pipes reducing leaks from installation errors.
- Inspection holes directly show the positions of inserted pipes, avoiding leakage caused by installation errors.

Standards

- ASTM F877
- CSA B137.5

PP-R PLUMBING SYSTEM

PP-R Pipes
PP-R Fittings

PP-R Pipes

RIFENG PP-R piping system, made out of high-quality polypropylene random copolymer, can be applied in both residential and commercial buildings.

Moreover, RIFENG has launched its mass flow PP-R series, bringing a more hygienic and secure plumbing experience to customers worldwide.

For over 20 years, RIFENG has been committed to supplying various PP-R pipes and fittings that comply with the EN15874 and EN ISO 15874 certificated by CE and AENOR.

Fiber Composite PP-R Pipe

- Strong light resistance to ensure clean water
- Low linear expansion coefficient
- Three-layer structure design, stable and reliable
- Upgraded temperature resistance

Basalt Fiber PP-R Pipe

Basalt fiber is a new type of inorganic, environmentally friendly and high-performance fiber material.

- Aerospace-grade basalt fiber with super-high pressure capacity
- Low linear expansion coefficient
- Linear expansion coefficient is 1/3 of ordinary PP-R pipe, $\leq 0.05\text{mm}/(\text{m}\cdot^{\circ}\text{C})$
- Temperature resistance upgrade
- Composite pipe, focusing on the advantages of three layers of materials, excellent performance, stable and reliable

Standards

- DVGW W544
- UNE EN ISO 15874
- NSF 61
- NMX-E-226/2-CNCP-2007

Advantages of RIFENG PP-R pipes

- Corrosion-resistant
- Light in weight
- Hygienic and non-toxic
- Outstanding heat and sound insulation
- Smooth inner wall
- A service life of up to 50 years under normal conditions (the maximum working temperature of RIFENG PP-R pipes is up to 80°C and the working temperature for long-term use is 70°C)
- Safe homogeneous connections

PP-RCT Pipe

New features were added to PP-R pipes thanks to the modern PP-RCT material. β -nucleation process as the base greatly improves the crystalline structure of polypropylene random copolymer PP. This process enhances the crystalline structure which enables pipes produced from this material to operate at higher pressure and temperatures.

- Greater performance in pressure and temperature resistance.
- Greater flow rate due to lower wall thickness
- Cost saving due to smaller diameter options
- Excellent impact resistance under low temperature

PP-R Fittings

RIFENG swallow-tailed structure

- Common structure
- RIFENG swallow-tailed structure

RIFENG swallow-tailed structure ensures zero leakage, excellent air-proof performance and safer connections.

The plastic section of the common PP-R fittings is apt to deform when the temperature fluctuates so that leakage may occurs.

Standards

- DVGW W534
- UNE EN ISO 15874
- NSF 61

GAS PIPING SYSTEM

Multilayer Pipes

Press Fittings

Compression Fittings

Multilayer Gas Pipe

- The integration of both plastic and metal pipes
- Entirely corrosion-resistant
- A barrier to the permeation of oxygen and light
- Service life up to 50 years
- Flexible and can retain bent shape
- Smooth inner wall ensures less pressure loss
- Light in weight
- Overlapped and butt welding are both available

Standards

- UNE 53008.1
- AS 4176.8
- ISO 17484
- ASTM F1281
- ISO 18225

UNDERFLOOR HEATING SYSTEM

Oxygen Barrier PEX Pipes
Multilayer Pipes
Underfloor Heating Manifolds

Oxygen Barrier PEX Pipes

RIFENG oxygen barrier PEX pipe is designed to prevent the oxygen molecules from entering the underfloor heating system. RIFENG oxygen barrier pipes meet the requirements of ASTM F876, F877 and CSA B137.5 and are ideal for laying under-floor pipe circuits.

Standards

- ASTM F876/F877
- CSA B137.5
- AWWA C904

Multilayer Pipes for Underfloor Heating

RIFENG PEX-AL-PEX pipe is composite with an aluminum layer that's overlapped welded and acts as a barrier to the passage of oxygen and light. It also provides excellent mechanical resistance and flexibility during installation.

Example: B1-12-16
 Outer diameter 16mm
 Inner diameter 12mm
 Hot water pipe

Standards

- ASTM1281
- CSA B137.10

Underfloor Heating Manifolds

Features

- Superior material for manifold body
- Flow meter is more accurate and easier to install without a spanner; the explosion-proof performance
- Substantially upgraded
- Return manifold equipped with stop valves and thermal actuators
- Excellent sealing performance with double O-rings
- Equipped with automatic and manual air vents and drain valves

Standards

- CSA B137.5
- ASTM F877
- ASTM F1807

Certificates

Technical data

Materials

Manifold body: stainless steel (FN16), brass(FN9)
 Seal: EPDM

Working media

Media 1: Water
 Media 2: 50% water and 50% ethylene glycol
 Media 3: 50% water and 50% propylene glycol

Connection

Supply / return: G1 "female
 Circuit: G3/4 "male
 Flow meter connection: G1/2 "male

Flow meters

Indication scale: 0.5-5L/min (0.13-1.32G/min)
 Indication tolerance: ±10%
 KVS value: 1.10

Working performance

Maximum working pressure: 10 bar (145 psi)
 Constant permissible temperature: 0°C (32°F) to 70°C (158°F)
 Maximum instantaneous working temperature(10min/ day): 100°C (212°F)
 Maximum differential pressure: 1 bar (14.5 psi)

AIR CONDITIONING PIPING SYSTEM

Multilayer Pipes
Compression Fittings

Standards

- ASTM F1281
- ICC-ES LC1035

Certificates

Multilayer Pipes

RIFENG air conditioning multilayer pipes are five layer composite pipes that combine the advantages of metal and plastic pipes. The aluminum layer is diffusion-tight and can reliably prevent oxygen and gas from permeating into pipe walls. It compensates and reduces snap-back forces and heat expansion as temperature changes.

Compression Fittings

Compression fittings for AC piping system

- Specially designed for RIFENG PEX-AL-PEX air conditioning pipes.
- High pressure resistant and corrosion resistant
- NBR O-rings for good leakproof performance
- Easy installation by a spanner

Advantages of RIFENG AC piping system

- Lower price than copper pipes
- Clean and easy to install with no soldering, welding or bonding needed
- Corrosion-resistant
- Barrier to the permeation of oxygen and light
- Service life up to 50 years
- Light in weight and flexible
- Smooth inner wall ensures low pressure loss
- Heat expansion similar to that of metal pipes, enabling larger pipe friction and closer pipe clip distance

PVC Drainage Piping Series

RIFENG solid drainage piping series is in accordance with GB/T 5836.1-2006, GB/T 5836.2-2006, ISO 3633 and AS/NZS1260 standards.

- Smooth drainage
Smooth pipe inner wall and seamless adhesive connection between pipe and fittings
- High impact resistance
Excellent physical and chemical properties and improved tensile strength
- Stiffeners
F30 fittings feature unique stiffeners which enable the structure to be more stable

Standards

- ISO 3633
- AS/NZS1260

RIFENG PVC Low Noise Drainage Series

RIFENG low noise drainage series adopts a unique spiral inner wall structure and double layers with a hollow chamber design. Several protruding triangular spiral edges are designed to allow the water downwards along the spiral edges to form stable and dense water swirl, while maintaining the air flow channel in the center of the pipe. This effectively reduces air pressure fluctuations in the standpipe, keeps drainage smooth and fast, significantly eliminates collision between water and air, reduces noise in the standpipe, and ensures a quiet and comfortable life.

RIFENG low noise drainage series include helix pipes, hollow pipes, hollow spiral pipes and low noise fittings to realize whirlpool low noise drainage.

Hollow pipes

Double layers with a hollow chamber design make a more excellent silencing effect;
The ring stiffness is higher than that of solid pipes so this pipes are more durable and strengthened

Hollow spiral pipes

Low noise

The double-layer structure forms a hollow chamber with at least 6 triangular swirling guide lines on the inner wall. This design features a better silencing effect and reduces the water flow noise by 10-15dB.

High strength

The ring stiffness is higher than that of solid pipes so this pipes are more durable and strengthened.

More economical

Can realize single pipe drainage and ventilation.

Helix pipes

Low noise

The unique spiral inner wall structure realizes swirling drainage, reduces the impact of water flow, and enhances noise reduction to ensure a quiet and comfortable life;

Ultra-fast drainage

Drainage is smooth and fast. The water flow of the standpipe swirled downward along the spiral edge, which greatly improves the drainage efficiency of the system. The flow of DN 110 standpipe is up to 6L/S, which is two times of the general drainage standpipe.

More economical

Can realize single pipe drainage and ventilation.

Low noise fittings

Ultra-fast drainage

The unique deepened P-shaped groove structure guides the water flow to swirl and fall along the pipe wall to improve the drainage efficiency;

Efficient noise reduction

The water flow drains along the standpipe from the tangential direction of the circumference to buffer the impact force of the water flow on the pipe wall and reduce the drainage noise;

Easy to install

Flexible sealing rubber ring connection, high installation efficiency, excellent sealing performance and anti-seismic performance

PVC RIGID CONDUIT SYSTEM

Conduit Pipes
Conduit Fittings

Conduit Pipes

Features of RIFENG conduit pipes

- Conduit pipes are easy to install and can be bent by spring under normal temperature, reducing the amount of fittings needed.
- The smooth inner wall of pipes reduces friction for easy electrical wire pulling
- Excellent insulation performance and endurance to resist AC2000V. Insulation resistance more than $1 \times 10^8 \Omega$.

Standards

- JG 3050-1998
- IEC-61386

D3/4 A	54	432	Male
D3/4 A	54	432	Male

INSTALLATION INSTRUCTIONS

F5 Installation Instructions

STEP 1: Pipe cutting

Cut the pipe vertically and precisely with the RIFENG pipe cutter.

STEP 2: Pipe beveling and rounding

Use RIFENG reamer to bevel and round the pipe end. Insert the pipe completely inside the reamer. Rotate the reamer in one direction several times to round the pipe end.

STEP 3: Pipe inserting into fitting

Choose a fitting in an appropriate size. Insert the pipe into the fitting until it reaches the plastic block. Make sure the pipe is completely inserted by checking the insertion depth through the inspection holes on the sleeve shoulder.

STEP 4: Pressing

Place the fitting into the jaw. Press the fitting until the jaw is fully closed. The press jaw must be placed close to the plastic gasket.

STEP 5: Checking

Open the handles and remove the pressing tool from the fitting and the installation is complete.

Notice:

- This installation manual is specifically for the 14-32(mm) multilayer piping systems.
- For best connection, RIFENG pipes should be connected with approved fittings recommended by RIFENG.

F9 Installation Instructions

Step 1:

Cut the pipe vertically and precisely with a pipe cutter.

Step 2:

Round and bevel the ends with the RIFENG reamer (Plastic reamer or T-reamer).

Step 3:

Choose a fitting in an appropriate size. Insert the pipe into the fitting until it reaches the plastic block. Make sure the pipe is completely inserted by checking the insertion depth through the inspection holes on the sleeve shoulder.

Step 4:

It is recommended to use the REMS TH profile electric compressing tool for F9 fitting installation.

Step 5:

Press the button on the latch bar to release the pin.

F9 Installation Instructions

STEP 6:

Position the corresponding jaw into the groove in the tool.

STEP 7:

Press the latch bar back into position to lock it.

STEP 8:

Press the tail to open the jaw.

STEP 9:

Insure the plastic block and sleeve are in the right position in the jaw; the margin of the block must be placed into the groove of the pressing section.

STEP 10:

Operate the tool using the trigger and hold the trigger until the pressing process is finished. When the pressing is completed you will hear a notification.

Notice:

- This installation manual is specifically for the 14-32(mm) multilayer piping systems.
- For best connection, Multilayer pipes should be connected with approved fittings recommended by RIFENG.

F6 Push-fit

STEP 1: Pipe cutting

Cut the pipe vertically and precisely with a pipe cutter.

STEP 2: Rounding and beveling

Multilayer pipe:
Round and bevel pipe ends with the RIFENG reamer.

Pex pipe:
Round the pipe ends with the RIFENG reamer, no need to bevel.
For quicker and easier insertion, you can bevel the pipe.

STEP 3: Removing

Removing the protective cap from the fitting. Make sure that both the fitting and pipe are clean and free of dirt and debris before making a connection.

STEP 4: Inserting

Choose the right size fitting for the pipe and push the pipe into the fitting firmly. Please don't insert the pipe obliquely.

STEP 5: Checking

Check the installed fitting. If the green indicator ring can be seen through the inspection holes, it is properly installed.

Notice:

- This installation manual is specially for the 14-32(mm) multilayer and PEX piping systems.
- For best connection, RIFENG pipes should be connected with approved fittings recommended by RIFENG.

F1C Installation Instructions

STEP 1: Pipe cutting

Cut the pipe vertically and precisely with a pipe cutter.

STEP 2: Rounding and beveling

Round and bevel the ends with the RIFENG reamer

STEP 3: Inserting

Place the nut and then the compression ring onto the pipe. Please note the threaded opening must face the pipe end.

Fully insert the fitting core into the pipe. Please don't damage the O-ring on the fitting core during insertion.

STEP 4: Compression

Tighten the nut with your finger first. Then tighten the nut with a spanner.

Notice:

- This installation manual is specifically for the 14-32(mm) multilayer piping systems.
- For best connection, RIFENG pipes should be connected with approved fittings recommended by RIFENG.

PEX+Lead Free Crimp Fittings (Copper crimp ring)

STEP 1: Pipe cutting

Cut the pipe vertically and precisely with the RIFENG pipe cutter

STEP 2: Inserting

Choose the right size fitting according to the pipe. Slide the copper crimp ring over the pipe to the correct position. Next, insert the fitting into the pipe until it reaches the shoulder of the fitting. Make sure it is completely inserted into the pipe and that the contact point is clean and free of impurities.

STEP 3: Pressing

Place the crimping end of the tool around the crimp ring and press the handles together. While pressing, make sure the crimping jaw is vertical to the pipe, the pressing contact must be free of impurities.

STEP 4: Checking

Use the GO-NO-GO gauge to check whether the pressing is completed. If the crimp ring slides into the "GO" slot, but stops at the shoulder in the "GO" slot, then the pressing is acceptable.

PEX+Lead Free Crimp Fittings (Stainless steel crimp)

STEP 1: Pipe cutting

Cut the pipe vertically and precisely with the RIFENG pipe cutter.

STEP 2: Sleeving

Choose the right size (slightly larger than the pipe) stainless steel crimp and slide it onto the pipe.

STEP 3: Inserting

Insert the fitting into the pipe until it reaches the shoulder of the fitting. Make sure it is completely inserted into the pipe and that the contact point is clean and free of impurities.

STEP 4: Pressing

Use the manual pressing tool with right size of jaw. Open the crimping tool and attach to the mouth of the crimp, press the jaw until it closes completely. While pressing, make sure the crimping jaw is vertical to the pipe. The pressing area must be clean and free of impurities.

The crimp will be tightened after pressing and the pipe will be fully linked with the fitting.

Notice:

- This installation manual is specifically for the 3/8"-1" PEX piping systems.
- For best connection, Multilayer pipes should be connected with approved fittings recommended by RIFENG.

PF15 PEX Press Fitting

STEP 1: Pipe cutting

Cut the pipe vertically and precisely with a pipe cutter.

STEP 2: Inserting

Choose an appropriately sized press fitting for the pipe, then slide it onto the pipe. Fully insert the fitting into the pipe.

STEP 3: Pressing

Make sure the sleeve is placed correctly in the jaw. The sleeve must be placed into the groove of the pressing section.

STEP 4: Verification

If pressed correctly, the joint will fit the "GO" side of the corresponding size of the gauge.

Notice:

- This installation manual is specifically for the 3/8"-1" PEX piping systems.
- For your safe connection, RIFENG pipes should be connected with approved fittings recommended by RIFENG.

PP-R Pipe Installation Instructions

STEP 1:

Cut the pipe vertically.

STEP 2:

Remove the burr and clean any rough edges. Use a pencil and the RIFENG marker to mark the melting depth on the pipe ends.

STEP 3:

Insert the pipe and fitting simultaneously into the melding heads of the device. Push the fitting as far as possible, push the pipe to the marked position. *Note: If pipe is pushed past the marked position or heated for too long, the pipe may be damaged or clogged. See specific times in table on the right.

STEP 4:

When the heating time is reached, quickly remove the pipe and fittings from the melding heads, then connect the pipe and fitting together evenly.

STEP 5:

Hold the pipe and fitting according to the connecting time until the welding is completed.

Notice:

- This installation manual is specifically for the 20~63(mm) PP-R piping system
- For best connection, RIFENG pipes should be connected with approved fittings recommended by RIFENG.

PVC Glue Connection

STEP 1: Pipe cutting

Cut the pipe vertically and precisely with the RIFENG pipe cutter.

STEP 2: Cleaning

Clean the surface of the pipe and fitting, make sure all burrs are removed from the inside and outside edges.

STEP 3: Marking

Mark the installation depth for the pipe and fitting.

STEP 4: Applying PVC glue

Coat the outside of the pipe and inside of the fitting with lubricating fluid (soapy water is suitable) for easier insertion.

STEP 5: Connection

After the pipe and fitting are coated with glue, quickly insert them and rotate to evenly distribute glue and ensure a firm connection.

After installation is complete, wipe away excess glue.

PVC Rubber-Ring Connection

STEP 1: Pipe cutting

Cut the pipe vertically and precisely with a pipe cutter.

STEP 2: Cleaning

Clean the surface of the pipe and fitting, make sure all burrs are removed from the inside and outside edges.

STEP 3: Marking

Mark the installation depth for the pipe and fitting.

STEP 4: Lubricant coating

Coat the outside of the pipe and inside of the fitting with lubricating fluid (soapy water is suitable) for easier insertion.

STEP 5: Connection

Loosen the nut, insert the pipe into the fitting, then tighten the nut to complete the connection.

Installation of PVC Fitting

STEP 1: Measuring

Wipe the surface of the pipe and fitting. Measure the installation depth.

STEP 2: Marking

Mark the installation depth.

STEP 3: Applying PVC glue

Evenly apply PVC glue to the pipe and fitting.

STEP 4: Connection

After the pipe and fitting are coated with glue, quickly insert them and rotate to evenly distribute glue and ensure a firm connection.

After installation is complete, wipe away excess glue.

Installation of Gang Box

STEP 1: Insert and tighten

Insert terminal adapter into the gang box and then tighten.

STEP 2: Marking

Wipe the surface of the pipe and fitting. Measure the installation depth.

STEP 3: Marking

Mark the installation depth.

STEP 4: Applying PVC glue

Evenly apply PVC glue to pipe and fitting.

STEP 5: Connection

After the pipe and fitting are coated with glue, quickly insert them and rotate to evenly distribute glue and ensure a firm connection.

After installation is complete, wipe away excess glue.
