

# LEONDARX<sup>®</sup> PLC

(Broadband Power Line Carrier Communication)

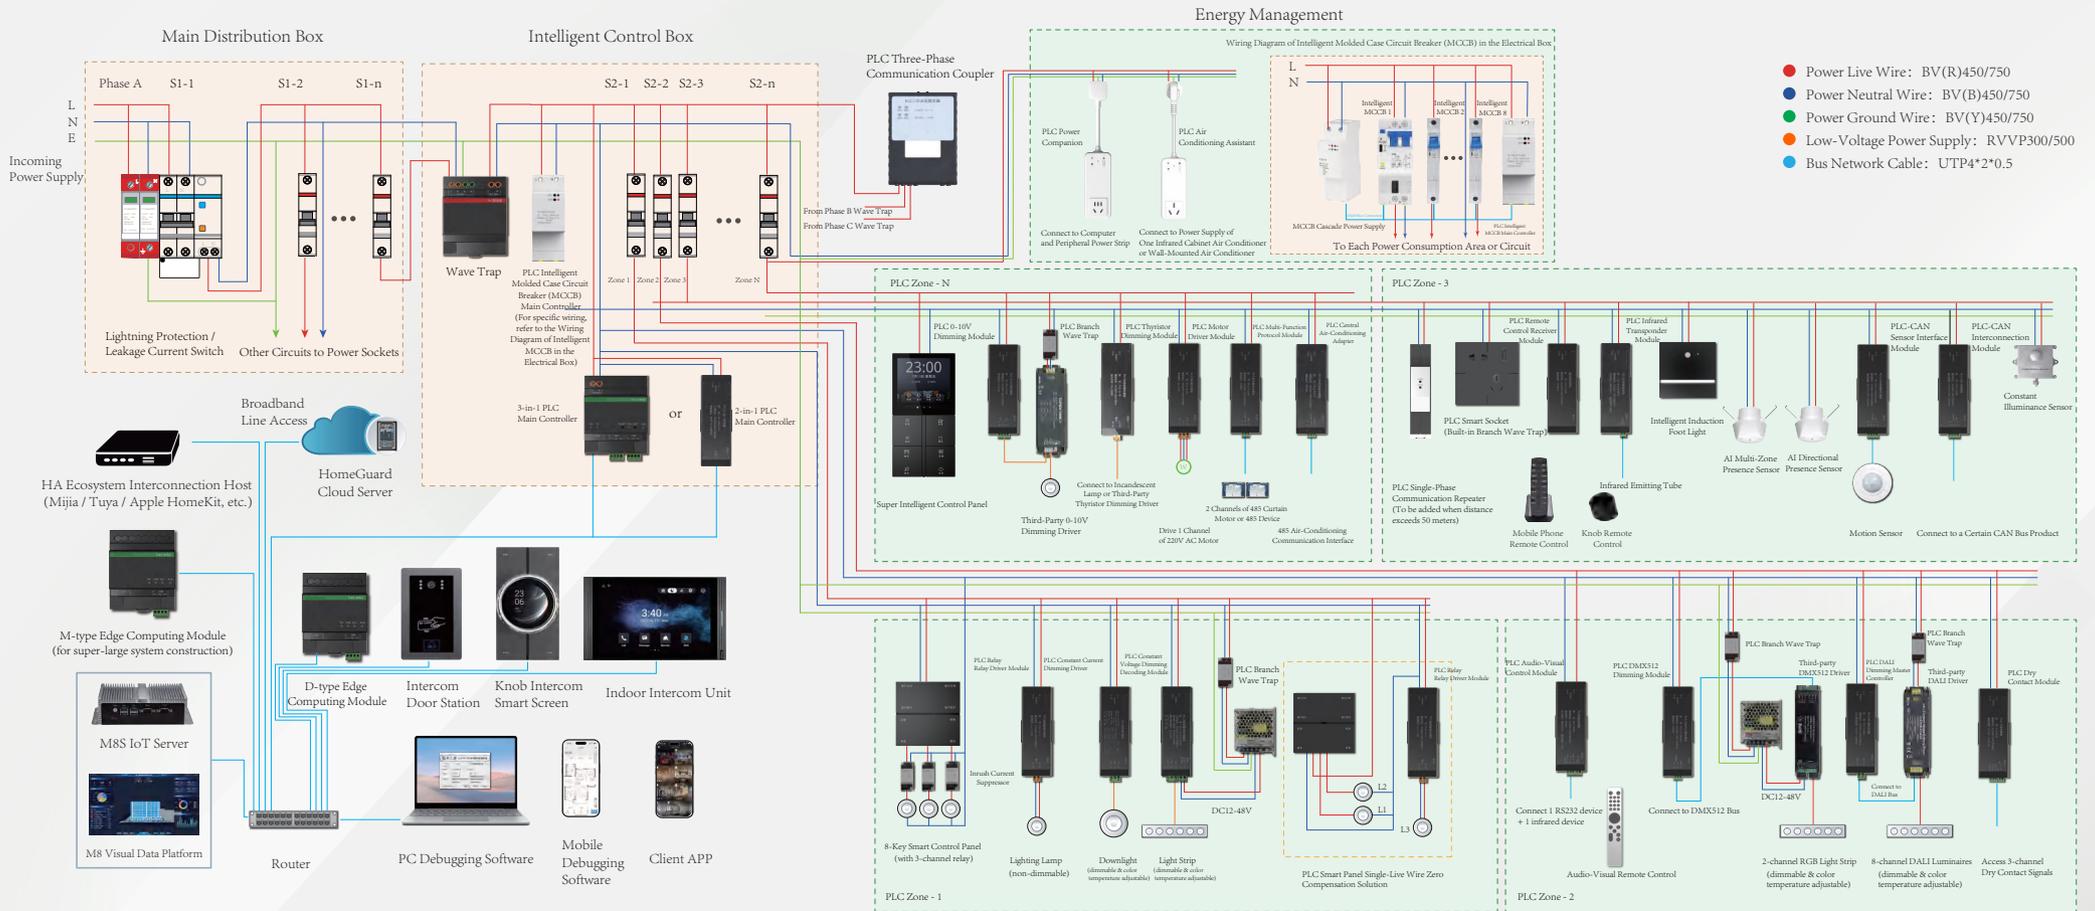

## Introduction to the Intelligent System

# LEONDARX "Five-installation" Intelligent System: 1+2+5+N

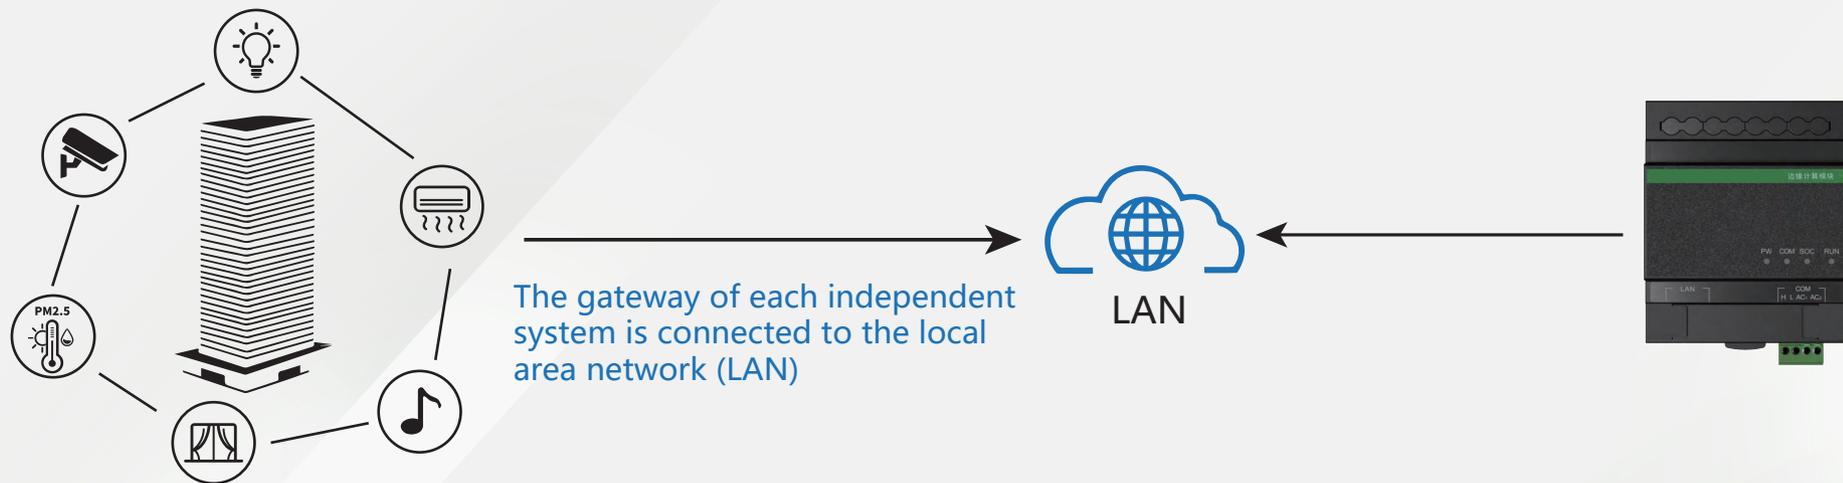

# Connection Diagram of LEONDARX PLC Power Line Smart System

# Solution for Integrating a Single Detached Building into a Super-Large Intelligent Control System

Take the intelligent control system of a 30-story building as an example

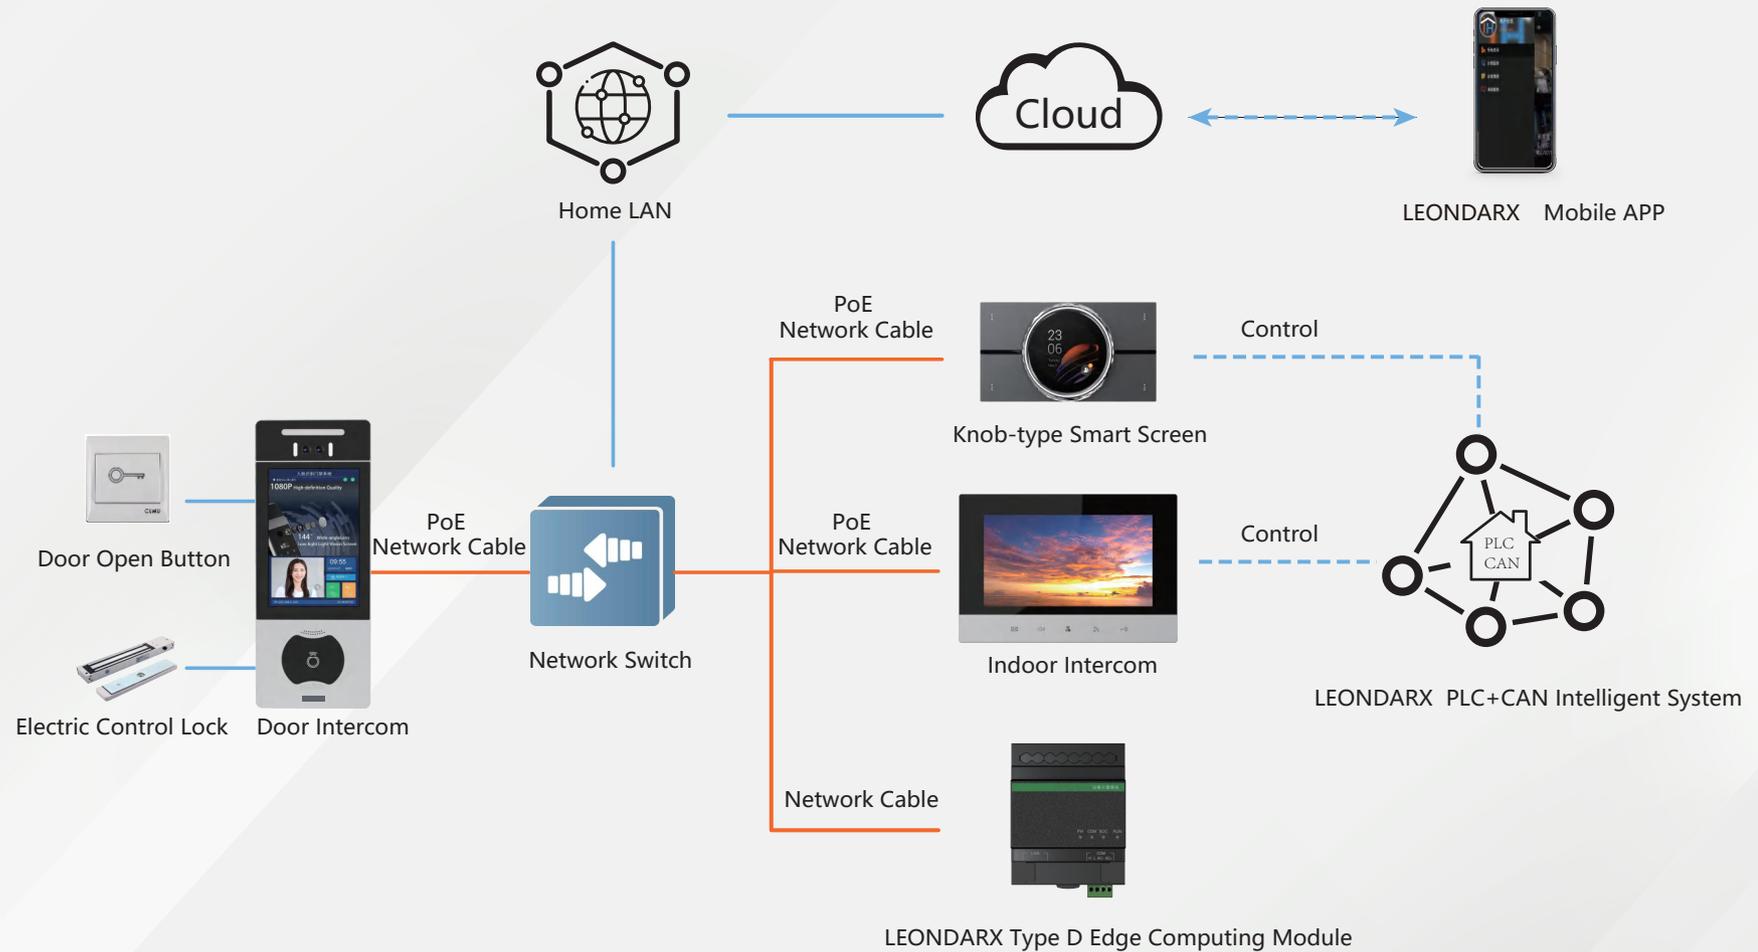

Every 1 or 2 floors are built into an independent LEONDARX PLC/CAN system, and the gateway of each system is integrated into a large system through the M1/M2 edge computing module

- The M1 edge computing module can integrate 2-10 physically independent LEONDARX systems into a super-large system.
- The M2 edge computing module can integrate 2-30 physically independent LEONDARX systems into a super-large system.

The greatest advantage of this system architecture: If any product in any independent system is damaged, the system will not crash, nor will it affect the normal operation of other independent systems.

# Topology Diagram of the Perfect Integration of LEONDARX CAN+PLC System & Intelligent Intercom System

## Free Control via Mobile APP

The LEONDARX Smart Home APP supports calling indoor/outdoor stations, remotely answering calls from the Door Station, remotely unlocking the door for visitors, and remote monitoring, etc.

## The Indoor Station and Knob-type Smart Screen are multi-functional devices

The Indoor Station and Knob-type Smart Screen serve as both intercom indoor screens and smart home control screens.

Point-to-point calls and one-to-many broadcasting are supported between Indoor Stations and Knob-type Smart Screens.

# Main Technical Features of LEONDARX PLC Intelligent System

## Avoid the "Cloud Pitfalls" — 01

It is independent of the cloud. When the external network is disconnected, the system can still be controlled via a mobile phone locally, and all local functions (such as panels, scenes, and sensors) remain unaffected.

## Avoid the "WiFi Pitfalls" — 02

The system is independent of WiFi, and at the same time, it is not dependent on the home router or switch. Even if there is no WiFi, the WiFi signal is poor, or the router is broken, all control functions except mobile phone control remain unaffected.

## Wave Traps Are Not Mandatory — 03

There is no need for wave traps to block signals from different PLC systems, and the control function remains unaffected.

## Avoid the "Host Pitfalls" — 04

The system is independent of a host and operates as a hostless system. When the LEONDARX PLC main controller is damaged, all functions except mobile phone control (such as individual control, group control, scenes, voice control, and sensor automatic control) remain completely unaffected.

## Full Coverage of Post-installation, Pre-installation, and Retrofit — 05

LEONDARX PLC products come in a wide range and can control lighting (including on-off modules, constant current modules, constant voltage modules, 0-10V modules, thyristor modules, PLC-DMX512 modules, PLC-DALI modules, etc.), curtains, HVAC equipment, home theaters, background music systems, fingerprint locks, and video intercom systems. They achieve full coverage of post-installation, pre-installation, and retrofit fields for intelligent systems.

## Single-Phase Signal Repeating — 06

It is equipped with a single-phase signal repeating function, enabling intelligentization in some scenarios that require long-distance signal transmission.

## No Node Quantity Limitation — 07

A single PLC system has no node quantity limitation; any device can access the network as long as the signal reaches it.

## Rapid Automatic Networking — 08

Regardless of the system scale, as long as the signal reaches, all PLC products can achieve automatic networking within 30 seconds.

## Worry-Free Branch Wave Trapping — 09

It is equipped with PLC branch wave traps, PLC surge current suppressors, and PLC smart sockets, which isolate lamps or devices with significant signal attenuation and interference.

## Single-Live Wire Panel Power Taking — 10

It is equipped with a single-live wire power taking module and an independent PLC relay drive module, which can upgrade traditional panels without a neutral wire.

## Surge Protection — 11

The PLC relay drive module (i.e., on-off module) has a surge protection function ( $\geq$ TV-12 level); in addition, there is a dedicated PLC surge current suppressor. When used with the panel's built-in relay to drive lamps with large surge currents, the service life of the relay is more than doubled.

## Efficient Offline Simulation and Debugging via Mobile Phone — 12

The mobile debugging software can create projects offline, perform system simulation and debugging, and then import the simulated settings on-site. This significantly shortens on-site debugging time and lowers the technical threshold for practitioners.

## Wave Traps Are Not Mandatory — 13

There is no need for wave traps to block signals from different PLC systems, and the control function remains unaffected.

## Scene Lighting Self-Learning — 14

The self-learning of all scene lighting in the current room can be automatically completed with one click via the panel only. This not only greatly improves debugging efficiency but also makes it easier for users to modify the scene lighting effects according to their personal preferences at any time after moving in.

## Easily Build Large-Scale Systems — 15

It is possible to integrate 2 to 30 physically independent LEONDARX PLC systems into a single large-scale system with mutual linkage.

## Ecosystem Sharing and Win-Win Cooperation — 16

Third-party devices or systems can connect and integrate into the LEONDARX PLC system via protocol docking, achieving ecosystem sharing and win-win cooperation.

# PLC smart panel

AI Position Presence Super Panel

Super Intelligent Control Panel

AI Position Presence Presence 6-Key Panel

Pure Screen Screen Intelligent Control Panel

LEONDARX has independently developed a full range of PLC smart panels, each integrated with 3-channel relays, facilitating the transformation of traditional lighting control wiring into PLC intelligent control.

LEONDARX's AI Position Presence Smart Panel is the first in the industry to integrate millimeter-wave presence sensing. It pioneers the disruptive design concept of " [millimeter-wave presence sensor + nightlight] hidden in the smart panel". In addition to the inherent functions of smart panels (buttons, touch screen, voice control, temperature, humidity and brightness detection, etc.), it can also realize sensorless intelligent control based on human presence detection. There is no need to drill separate holes or route wires for exposed human sensors, making the space more concise and aesthetically pleasing. The unique nightlight on the panel automatically adjusts its brightness according to sensing at different times, caring for family members when they get up at night, which is warm and full of ambiance.

Environmental Parameter Monitoring

- Cloud-Independent: Adopts offline local voice control, no network connection required
- Full-Screen Touch Control: Supports multi-page sliding and page-turning operations, simple and stylish
- Intelligent Sensing: Integrates multiple detection functions: temperature, humidity, illuminance, and human presence detection
- Rich Interfaces: Integrates a variety of dedicated control interfaces, enabling intelligent linkage between buttons and screen
- Flexible Customization: Any device, scene, or security operation can be freely customized

## Client APP

- Multi-user support with hierarchical function and permission management
- Custom room/local live map display
- Remote control with a single device, what you see is what you get
- No external network access will never affect the APP's local control functionality

# PLC Intelligent Sensing

## AI Directional Presence Sensor

24G millimeter-wave technology enables detection of human movement and micro-movement directions, realizing active and seamless intelligent control in home spaces.

Two operating modes are provided: Normal Presence Mode and Direction Recognition Mode.

The rotating probe allows adjustment of the sensing angle and range (the small arrow on the sensor cover indicates the direction of millimeter-wave sensing).

The sensing distance can be set via software.

The sensor automatically identifies different states such as disarming, arming, sleeping, night waking, getting up, manual/automatic mode, and time periods, and adapts to different AI sensing algorithms.

It integrates ambient light intensity detection.

Compact size with embedded installation; it can operate by directly connecting to the CAN bus (if the CAN bus is not laid to the sensor, it can be connected to the HPLC system via the PLC-CAN sensor interface module).

## AI Multi-Zone Presence Sensor

Industry-leading Configuration: Dual millimeter-wave probes, supporting custom configuration of 8 sensing zones (1 total zone + 5 sub-zones + 2 fixed shielded zones).

One Replaces Multiple: The total zone and each sub-zone enable detection of human movement and micro-movement presence, realizing ultimate seamless intelligent control for multiple zones in the sensing space—fully outperforming human sensors that can only detect a single zone.

Bed Entry/Exit Detection: For the bed zone, it automatically identifies bed entry and exit movements.

Sleep Behavior Detection: It detects when the human body in the bed zone enters a static state, automatically activates sleep mode with a delay, and automatically filters out movements such as turning over, shaking the quilt, and lifting hands.

Night Wake-up Detection: In sleep mode, it automatically identifies getting-up movements and triggers night wake-up mode.

Interference Shielding: Demarcating "shielded zones" can eliminate interference from fans, curtains, air conditioners, etc.

Pet-trigger Prevention: The dynamic height mechanism can eliminate interference from small pets, robot vacuums, air conditioner air outlets, etc.

## Microwave Motion Sensor

5.8G microwave technology, applied to microwave motion detection in public areas, replaces third-party human sensors. It can work independently or be defined as an auxiliary sensor for AI directional presence sensors to collaborate with them.

The rotating probe allows adjustment of the sensing angle and range (the small arrow on the sensor cover indicates the direction of microwave sensing).

The sensing distance can be set via software (not exceeding 11 meters).

The sensor automatically identifies different states such as disarming, arming, sleeping, night waking, getting up, manual/automatic mode, and time periods, and adapts to different sensing algorithms accordingly.

It integrates ambient light intensity detection.

Compact size with embedded installation; it can operate by directly connecting to the CAN bus (if the CAN bus is not laid to the sensor, it can be connected to the HPLC system via the FLC-CAN sensor interface module).

# LEONDARX PLC System Modules

Three-in-One PLC Main Controller

- The PLC main controller is responsible for providing network access credentials to other PLC devices and also serves as a communication bridge between the gateway and other PLC devices.
- Gateway Functions (APP Control, System Debugging, WeChat Alerts)
- Logical Function (Provides 87 Customizable Intelligent Logical Events)
- Provides system time
- Only one PLC main controller needs to be configured per system
- Provides a CAN bus interface to connect to the LEONDARX CAN bus system

PLC Wave Trap

- PLC wave traps are used to filter out power line interference and improve the communication stability of PLC systems.
- It is recommended to configure an independent PLC wave trap at the rear end of each phase of the incoming power line.
- For villa projects, wave traps may not be installed; for flat projects, if adjacent households all have LEONDARX PLC systems installed, it is recommended that each household install a wave trap.

PLC Three-Phase Communication Coupler

- Installed in a three-phase distribution box, it only needs to be connected to the three-phase live wires (A-Yellow/B-Green/C-Red) and neutral wire (N-Black) correspondingly to realize cross-phase transmission of PLC signals between different phases.
- It is recommended to configure one unit per floor in a villa.

PLC Single-Phase Communication Repeater

- It provides a technical solution for extending the single-phase transmission distance of PLC power line carriers.
- Generally installed downstream of the PLC main controller, it only needs to be connected to the neutral and live wires to realize the relay transmission of PLC signals in the same phase.
- Communication distance: up to 200 meters under general conditions, with a maximum communication distance of 500 meters.
- To ensure the strength of the communication signal, it is recommended to configure one unit when the PLC single-phase communication distance exceeds 50 meters.

## A1 SKY SWITCH

Brilliant, marvelous by nature

Plating strip decoration, acrylic night light lamp, large board widescreen, four kinds of color selection, exquisite and frosted texture, subversive material upgrade.

### **A timeless trend**

Irresistible look, surprising feel. The well-established p50 design line has been expanded to now include a new surface: black matt. Accentuate exclusive trends and show contrasts -with its clear lines and elegant design. Ideal for sophisticated interiors, both at home or in business premises. P50 in black matt is the perfect match for stylish, versatile and future-proof electrical installation.
