

Originating from nature, mineral raw materials

Cardamia flexible tile are made from natural minerals as raw materials, which are of the same origin as traditional Chinese painting. A variety of minerals blend together to create a color that exudes a calm and realistic state, lasting for a long time and not easily fading.

Stem from nature Return to nature

Natural renewable inorganic matters (including natural stone powder and mineral powder) are separated into Cardamia four primary colours - red, yellow, white and black and ground into microscale powder. By combining econic clay and curve temperature control based pressing technique, Cardamia flexible tile came into being.

New Material, Green, Environment-Friendly

Cardamia flexible tile is a new material that is eco-friendly, economical and symbolic.

Flexible tile is not only suitable for wall coverings, but also a natural material that opens up new future-oriented perspectives for urban life and offers properties that no other interior design material has.

What is Flexible Tile

Cardamia flexible tile is made from natural stone powder, mineral powder, clay and other natural materials. It can be reprinted with stone texture, wood grain and any other material's texture and colour. It can be shaped as any things and its minimum bending radius is 200mm, which brings about infinite possibilities.

LIGHTWEIGHT
3-6kg/m²

THIN
While keeping 3D texture
thickness up to 2mm

FLEXIBLE
Shape as any things
as whatever you want

BREATHABLE
Breathable flexible tile
Balance air humidity

Besides excellent **Decorative Property**
We also focus on the product's **Application**

Water and moisture resistance

Aging resistance

Class A fire protection

Zero formaldehyde

Comparison Data

MORE DURABLE

2000h aging resistance experiment certification,
which means it can be used 40-50 years outdoor equivalently

MORE BREATHABLE

Eradicate decorated odor effectively in 15 days
Develop living experience quickly (Used area occupied elevation $\geq 50\%$)

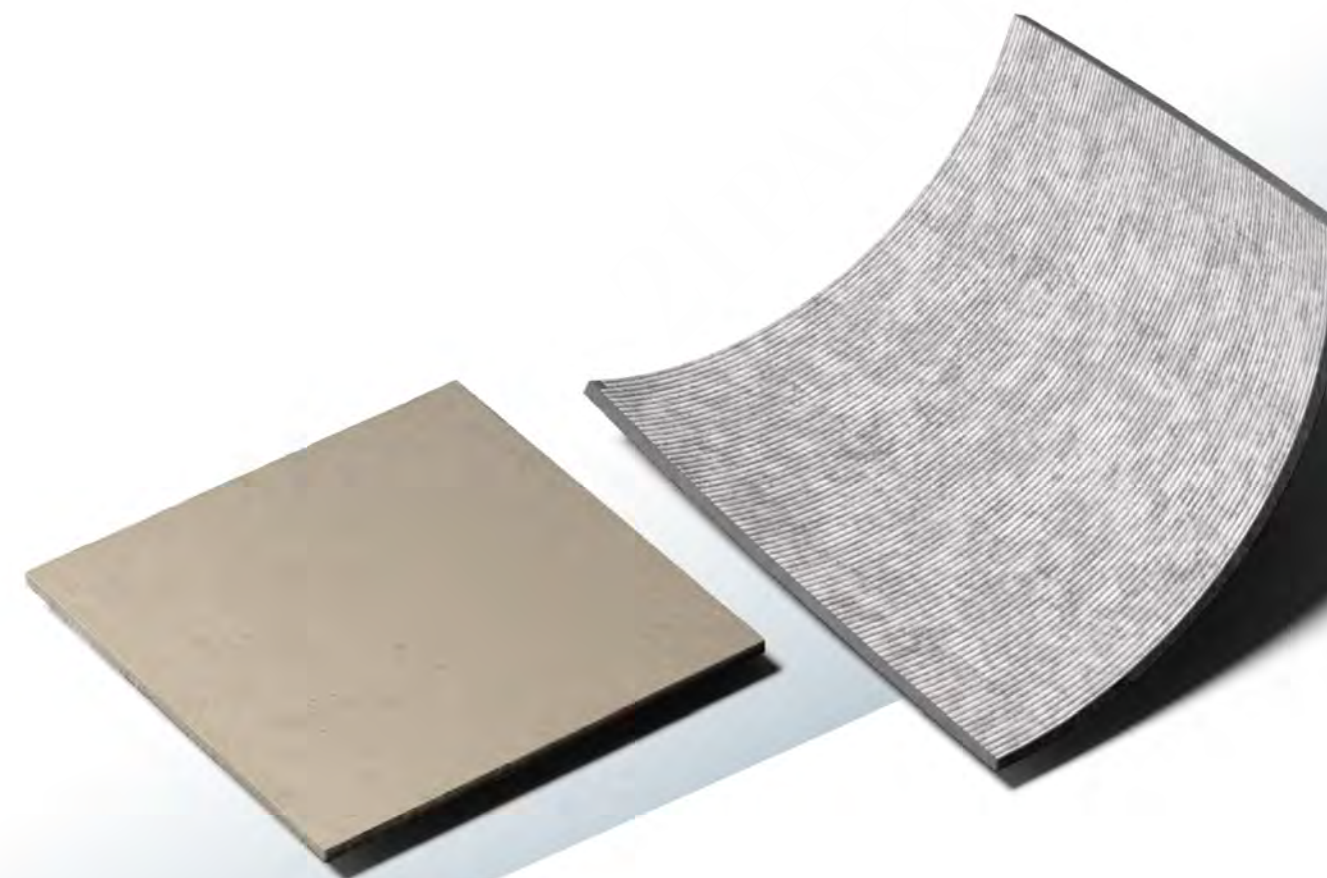

MORE FLEXIBLE

Shape with objects, on-site can be curved
cost is reduced to 30%-50%, meanwhile retain the stone aesthetics

MORE NATURAL TOUCH

Natural mineral raw materials, touch texture restores the true essence of stone

Construction

1

Strict acceptance inspection of the base guarantees its cleanness and smoothness without empty drum.

2

Cut the product with a table saw or handheld cutter.

3

Plastering on product back, with plastering rate up to 90%.

4

2 to 3 people work together to align this product with skirting at the bottom and paste it.

5

Drive a nail into the product top with a nail gun to prevent its falling. ***Never drive a nail into the product's middle or bottom part; otherwise, the surface may swell.**

6

At last, clean the surface with a **dry sponge**.
